

Nubeprint Data Capture (CPM)

Versatility – Security - Efficiency

VERSATILITY: Nubeprint can receive data from the printers in several ways

- **CPM (Cloud Printing Monitor):** Native App for the major platforms
 - ◆ Microsoft Windows
 - ◆ GNU/Linux
 - ◆ Apple macOS
 - ◆ UNIX
 - ◆ Raspbian
- **CPM add-ons:** WebJetAdmin, LexmarkFleetTracker, OKISupervision, SafeCom, Pharos, PaperCut, Taurus, Ubiquitech, NetAdmin, SharpEdiag, etc.
- **SNMP Traps**
- **Multiple communication protocols** (HTTP/S, SMTP) & authentication (Proxy, etc)
- **Integration with your own DCA:** To facilitate the migration from standard monitoring tools to the Nubeprint CPM.

SECURITY: Meets the highest standards of safety and the most important international regulations:

- Strict security compliance
- No need to open extra ports. Unidirectional communication
- No confidential data is captured (jobs, names, etc.). Restricted to capture only the data that is needed to manage each device
- No need of Print Server
- Supports layers of encryption. Data transmitted from the CPM to the CPS Server is fully auditable
- Auditable and configurable by the customer

EFFICIENCY:

- Simple executable. Automatic configuration
- No dependencies. Third party software is not necessary (database, frameworks, etc)
- Smart data capture: optimized bandwidth
- Configurable for any size & type of network
- Unlimited number of CPMs. No need for an extra license. Unlimited number of printer devices
- Fully respectful with the network and its printers
